

Key Colorado Vital Statistics for 2000

These data will be included in the 2000 Annual Report of Vital Statistics, published by the Health Statistics Section of the Colorado Department of Public Health and Environment. For more information e-mail: health.statistics@state.co.us.

Summary of 2000 Vital Statistics

Table S1. Selected vital statistics: Colorado residents, selected years, 1910-2000	2
Table S2. Selected vital statistics: Colorado occurrences, 1961-2000	3
Table S3. Vital events by residence/occurrence: Colorado, 2000	3
Table S4. Colorado vital statistics by month and residence/occurrence: Colorado 2000	4
Table S5. Vital statistics ranking of states: United States 2000	5
Table S6. Vital statistics ranking of Colorado counties: Colorado residents, annual average, 1996-2000	7
Table S7. Selected vital statistics for teen age groups: Colorado residents, 2000	11
Table S8. Selected vital statistics by race/ethnicity: Colorado residents, 2000	12
Table S9. Health status indicators and selected year 2000 national objectives: Colorado residents, 1980, 1985-2000	14
Table S10. Health status indicators by county and region: Colorado residents, 2000	15
Table S11. Health status indicators by county and region: Colorado residents, annual average, 1996-2000	17
Table S12. Vital statistics summary by county and region: Colorado residents, 2000	19
Table S13. Vital statistics summary by county and region: Colorado residents, annual average, 1996-2000	21
Table S14. Selected vital statistics for teens age 15-19: Colorado residents, 2000	23
Table S15. Vital statistics summary by city: Colorado residents, 2000	25
Table S16. Vital statistics summary by city: Colorado residents, annual average, 1996-2000	27

Table S1. Selected vital statistics: Colorado residents, selected years, 1910-2000

YEAR	COLORADO POPULATION	TOTAL BIRTHS		LOW WEIGHT BIRTHS		BIRTHS TO UNMARRIED WOMEN		TOTAL DEATHS		INFANT DEATHS		NEONATAL DEATHS	
		N	RATE	N	%	N	%	N	RATE	N	RATE	N	RATE

Colorado population figures are April 1 census counts for census years before 1970, and are midyear estimates for other years. Population figures for 1980-1989 are 1990-based estimates and figures for 1990-2000 are 2000-based estimates from the Demography Section, Colorado Division of Local Government. Birth rates are live births per 1,000 population. Percentages are calculated using total births of each year as the denominator excluding cases with specific characteristics unknown. Death rates are deaths per 1,000 population. Infant and neonatal death rates are deaths per 1,000 live births.

Table S2. Selected vital statistics: Colorado occurrences, 1961-2000

YEAR	LIVE BIRTHS	DEATHS	INFANT DEATHS	NEONATAL DEATHS	SPONTANEOUS FETAL DEATHS 20+ WEEKS	INDUCED TERMINATIONS OF PREGNANCY	MARRIAGES	MARRIAGE DISSOLUTIONS
1961	46,505	15,626	1,200	885	600	-	16,842	5,600
1962	45,676	16,403	1,121	815	575	-	17,037	6,700

1991	53,955	23,059	484	269	407	11,372	33,681	19,105
1992	54,751	22,888	436	247	385	10,607	33,670	19,509
1993	54,200	24,263	450	245	356	10,115	34,036	19,138
1994	54,268	24,662	391	231	382	9,584	34,615	18,844
1995	54,572	25,529	377	240	399	9,384	34,296	-
1996	56,059	26,127	389	264	370	9,710	34,457	-
1997	56,869	26,082	421	265	399	9,183	34,883	-
1998	59,816	27,066	425	284	382	7,493	33,824	19,537
1999	62,387	27,573	430	278	442	5,017	35,670	20,188
2000	65,679	27,666	426	296	400	-	36,104	20,063

Counts are for events occurring in Colorado regardless of place of residence. Marriage dissolution data for 1995-1997 are not available. Counts of spontaneous fetal deaths and induced terminations of pregnancy may be underreported. - indicates data not available.

Table S3. Vital events by residence/occurrence: Colorado, 2000

VITAL EVENT	VITAL STATISTICS OF COLORADO RESIDENTS BY PLACE OF OCCURRENCE			VITAL STATISTICS OF COLORADO OCCURRENCES BY PLACE OF RESIDENCE		
	TOTAL	COLORADO	OUT-OF-STATE	TOTAL	COLORADO	NONRESIDENT
Live Births	65,429	65,173	256	65,679	65,173	506
Low Weight Births	5,549	5,513	36	5,665	5,513	152
Births to Unmarried Women	16,339	16,294	45	16,430	16,294	136
Deaths	27,229	26,718	511	27,666	26,718	948
Infant Deaths	402	398	4	426	398	28
Neonatal Deaths	279	276	3	296	276	20
Postneonatal Deaths	123	122	*	130	122	8
Reported Spontaneous Fetal Deaths						
20+ Weeks Gestation	-	386	-	400	386	14
<20 Weeks Gestation	-	-	-	1,670	-	-
Perinatal Deaths	-	662	-	696	662	34
Reported Induced Terminations of Pregnancy	-	-	-	-	-	-
Marriages	-	-	-	36,104	-	-
Marriage Dissolutions	-	-	-	20,063	-	-

Counts for spontaneous fetal deaths and induced terminations of pregnancy may be underreported. See Technical Notes for descriptions of data items. - indicates data not available.

Table S4. Colorado vital statistics by month and residence/occurrence: Colorado 2000

VITAL EVENT	N/%	TOTAL	JAN	FEB	MAR	APR	MAY	JUN	JUL	AUG	SEP	OCT	NOV	DEC
LIVE BIRTHS:														
Residence	N	65,429	5,086	4,989	5,502	5,298	5,730	5,530	5,636	5,666	5,693	5,609	5,347	5,343

Vital statistics are from the National Center for Health Statistics rather than from the state's own files, therefore statistics for Colorado here may differ somewhat from those elsewhere in this report. * All but birth figures for 2000 are provisional. Population figures are from the U.S. Census Bureau. Vital Statistics are by state or residence except for marriages and marriage dissolutions, which are compiled by place of occurrence. States appear alphabetically for all tied ranking. "-" indicates data not available.

Table S6. Vital statistics ranking of Colorado counties: Colorado residents, annual average, 1996-2000

Five-year average data are used to provide more reliable information for counties with small numbers of annual events. Population figures presented are for 2000. Age-adjusted death rates are adjusted to the 2000 U.S. population using the direct method applied to 10-year age groups. Infant deaths are deaths in the first year of life. Neonatal deaths are deaths occurring prior to the 28th day of life. Data were ranked to one decimal with ties broken alphabetically using the name of the county. * indicates fewer than three average annual events in the category.

Fertility rates are births per 1,000 female population of each age group. Fertility rates for the "All Ages" category are total births per 1,000 female population age 15-44. Births of <2,500 grams are defined as low weight births. Births of <1,500 grams are defined as very low weight birth. Percentages are calculated using total births or deaths of each age group as the denominator, excluding cases with specific characteristic unknown. Infant mortality rates are infant deaths per 1,000 live births. Death data for Asian and American Indian categories are not presented due to small numbers. Crude death rates are deaths per 100,000 population. Crude death rates for the "All Ages" category are not intended for comparison. Age-adjusted rates should be used to compare this category. *Total Firearm Deaths" include suicide, homicide, unintentional injury, and undetermined causes. See Technical Notes for definitions of alcohol-related and drug-related deaths. * indicates fewer than three events in the category.

Sums may not add to total due to cases with age unknown or race as "Other Nonwhite" or "Unknown." Percentages are calculated using total births of each race/ethnicity group as the denominator, excluding cases with specific characteristic unknown. Births of <2,500 grams are defined as low weight births. Births of <1,500 grams are defined as very low weight births. Crude death rates are deaths per 100,000 population, except infant (<1 year) mortality rates which are per 100,000 live births. The column heading "AGE ADJ." indicates age-adjusted death rate. Age-adjusted death rates are per 100,000 population and are adjusted to the 2000 U.S. Population using the direct method applied to 10-year age groups. See Technical Notes for detailed explanation of age adjustment. * indicates fewer than three events in the category.

Health status indicators were developed to meet Year 2000 Objective 22.1, "Develop a set of health status indicators appropriate for Federal, State and local health agencies and establish use of the set in at least 40 states." For detailed descriptions of Year 2000 Objectives, please refer to *Healthy People 2000: National Health Promotion and Disease Prevention Objectives*, published by the U.S. Department of Health and Human Services. - indicates that there are no comparable Year 2000 National Objectives. Teen births are births to mothers age 10-17. Teen fertility rates are the number of births per 1,000 women age 10-17. Low weight births are <2,500 grams. Late prenatal care is care beginning later than the 1st trimester, including births with no care or care at delivery only. Percentages are calculated using total births of each year as the denominator, excluding cases with specific characteristics unknown. Infant deaths are deaths in the 1st year of life. Infant death rates are the number of infant deaths per 1,000 live births. All other death rates are deaths per 100,000 population and are age adjusted to the 1940 U.S. population using the direct method applied to 10-year age groups. See Technical Notes for a detailed explanation of age adjustment.

Table S10. Health status indicators by county and region: Colorado residents, 2000

Health status indicators were developed by the Centers for Disease Control for tracking the Year 2000 Objectives. For these indicators, teen births are considered births to mothers age 10-17. Teen fertility rates are the number of births per 1,000 women age 10-17. Low weight births are <2,500 grams. Late prenatal care is care beginning later than the 1st trimester, including births with no care or care at delivery only. Percentages are calculated using only those births with the specific characteristic being measured in the denominator. Infant deaths are deaths in the first year of life. Infant death rates are the number of infant deaths per 1,000 live births. ¹Crude death rates are per 1,000 population. ²Age-adjusted death rates are per 100,000 population and are adjusted to the 2000 U.S. population using the direct method applied to ten-year age groups. See Technical Notes for a detailed explanation of age adjustment. Sums may not add to total due to cases with county of residence unknown. * indicates fewer than three events in the category.

Table S11. Health status indicators by county and region: Colorado residents, annual average, 1996-2000

Health status indicators were developed by the Centers for Disease Control for tracking the Year 2000 Objectives. For these indicators, teen births are considered births to mothers age 10-17. Teen fertility rates are the number of births per 1,000 women age 10-17. Low weight births are <2,500 grams. Late prenatal care is care beginning later than the 1st trimester, including births with no care or care at delivery only. Percentages are calculated using only those births with the specific characteristic being measured in the denominator. Infant deaths are deaths in the first year of life. Infant death rates are the number of infant deaths per 1,000 live births. Crude death rates are per 100,000 population. Age-adjusted death rates are per 100,000 population and are adjusted to the 2000 U.S. population using the direct method applied to ten-year age groups. See Technical Notes for a detailed explanation of age adjustment. Sums may not add to total due to cases with county of residence unknown. * indicates fewer than three events in the category.

Table S12. Vital statistics summary by county and region: Colorado residents, 2000

Birth rates are per 1,000 population. The death rate in the "Total Deaths" category is per 100,000 population. Percentages are of total births, excluding cases with specific characteristics unknown. Infant deaths are deaths in the first year of life. Neonatal deaths are deaths occurring prior to the 28th day of life. Postneonatal deaths are deaths occurring at 28 days to one year of life. Infant, neonatal and postneonatal mortality rates are deaths per 1,000 live births. Perinatal deaths are deaths of a fetus of at least 20 weeks gestational age or a child <28 days of age. Perinatal death rates are perinatal deaths per 1,000 live births and spontaneous fetal deaths of 20+ weeks gestation. Sums may not add to total due to cases with county of residence unknown. * indicates fewer than three events in the category.

Table S13. Vital statistics summary by county and region: Colorado residents, annual average, 1996-2000

All rates and percentages are based on five-year average annual counts (carried to more than one decimal when calculated). Birth rates are per 1,000 five-year average population, and death rates are per 100,000 five-year average population. Counts may not add to total due to rounding. Percentages are of total births, excluding cases with specific characteristics unknown. Infant deaths are deaths in the first year of life. Neonatal deaths are deaths occurring prior to the 28th day of life. Postneonatal deaths are deaths occurring at 28 days to less than one year of life. Infant, neonatal and postneonatal mortality rates are the average annual deaths per 1,000 average annual live births. Perinatal deaths are deaths of a fetus of at least 20 weeks gestational age or an infant under 28 days of age. Perinatal death rates are perinatal deaths per 1,000 live births and spontaneous fetal deaths of 20+ weeks gestation. Sums may not add to total due to cases with county of residence unknown. * indicates fewer than three events in the category.

Fertility rates are births per 1,000 women age 15-19. Percentages are calculated using teen births of each county/region as the denominator, excluding cases with specific characteristic unknown. Death rates are deaths per 100,000 population age 15-19. Unintentional injuries include motor vehicle and other accidents. Sums may not add to total due to cases with county of residence unknown. * indicates fewer than three events in the category.

Teen births are births to mothers age 10-17. Low weight births are <2,500 grams. Births listed with "Care after 1st Trimester" include births with no prenatal care or care at delivery only. Counts include only those records that had residence "Inside City Limits" box checked. Only cities with 25 or more births in 2000 are included in this table. * indicates fewer than three events in the category.

Table S16. Vital statistics summary by city: Colorado residents, annual average, 1996-2000

All figures presented are five-year annual averages. Teen births are births to mothers age 10-17. Low weight births are <2,500 grams. Births listed with "Care after 1st Trimester" include births with no prenatal care or care at delivery only. Counts include only those records that had residence "Inside City Limits" box checked. Only cities with 25 or more annual average births during 1996-2000 are included in this table. * indicates fewer than three events in the category.
