1997	3,935,289	56,505	1.3	14.4	3,894,970	0.1	14.6	

Birth rates are live births per 1,000 population. Colorado population figures are April 1 census counts for census years before 1970 and midyear estimates for other years. Population figures for 1980-1989 are 1990-based estimates and figures for 1990-1997 are 1997-based preliminary estimates from the Demography Section, Colorado Division of Local Government. Different population estimation methods were used for different periods. U.S. counts for years before 1960 are adjusted for underregistration. U.S. data are from the National Center for Health Statistics and are preliminary for 1997.

Table B2. Live Births by Sex and Plurality Status: Colorado Residents, 1975-1997

YEAR	TOTAL BIRTHS	FEMALE		MALE		SINGLE BIRTHS		PLURAL BIRTHS		TWINS	TRIPLETS	QUADS	QUINTS

General fertility rates are total live births per 1,000 women age 15-44. Age-specific fertility rates are live births per 1,000 women in each age group. Total fertility rates are the sum of the age-specific fertility rates in each age group, 10-14 through 45-49. Since five year age groups are used, the sum is multiplied by 5, with results rounded to the nearest 0.5. Total fertility rates express the number of births that would occur per 1,000 women if age-specific fertility rates for a given year were to apply throughout their childbearing years. U.S. data are from the National Center for Health Statistics and are preliminary for 1997. - indicates data not available.

Sums may not add to total due to cases with race as other nonwhite or unknown. Percentages are calculated using the total live births of each year as the denominator, excluding cases with race unknown. Birth records began to include ethnic data in 1978. The reporting of Hispanic origin was revised in 1989.

Sums may not add to total due to cases with age of mother unknown. Fertility rates are live births per 1,000 female population in each age and race/ethnicity group. Total population is the female population age 15-44 only. Population figures are 1997-based preliminary estimates from the Demography Section, Colorado Department of Local Affairs. * indicates fewer than three events in the category.

46+	145,291	40	0.3	10	25.0	5	12.8	6	15.0

Total population of women includes ages 15-44 only. Age <13 population is the female population age 11 and 12. Age 46+ population is the female population age 46 through 50. Population figures are 1997-based preliminary estimates from the Demography Section, Colorado Division of Local Government. Fertility rates are live births per 1,000 female population for each age. Percentages are calculated by using total births of each age as the denominator, excluding cases with characteristic unknown. * indicates fewer than three events in the category.

The definition of low weight birth was revised in 1979 from 2,500 grams or less to <2,500 grams. Births of <1,500 grams are defined as very low birth weight. U.S. data are from the National Center for Health Statistics and are preliminary for 1997. - indicates data not available.

40+	12	*	*	*	*	8	66.7	3	25.0	*	*

Percentages are calculated using the total births of each age and race/ethnicity group as the denominator, excluding cases with birth weight unknown. Sums may not add to total due to cases with birth weight, age, or race/ethnicity of mother not shown or unknown. Births of <1,500 grams are defined as very low birth weight. Births of <2,500 grams are defined as low birth weight. * indicates fewer than three events in the category.

Clinical estimates of gestational age are based on the physician's estimate using a scale of physical examination factors. Percentages are calculated using the total births of each gestational age category as the denominator, excluding cases with birth weight unknown. Sums may not add to total due to cases with birth weight unknown. * indicates fewer than three events in the category.

Percentages are calculated using the total births of each age and race/ethnicity group as the denominator, excluding cases with Apgar score unknown. Sums may not add to total due to cases with age or race/ethnicity of mother unknown or not shown. * indicates fewer than three events in the category.

Maternal smoking status is presented as reported on birth certificates. Percentages are calculated using total births of each age, race/ethnicity, education, or marital status category as the denominator, excluding cases with smoking status unknown. Sums may not add to total due to cases with certain maternal characteristics unknown. * indicates fewer than three events in the category.

Maternal smoking status is presented as reported on birth certificates. Percentages are calculated using total births of each maternal smoking status group as the denominator, excluding cases with certain characteristics unknown. Sums may not add to total due to cases with certain birth characteristics unknown. * indicates fewer than three events in the category.

Live birth order refers to the total number of children born live to mother. Rates are live births per 1,000 female population in each age group and race/ethnicity category. Rates for the "All Ages" category are computed using total births (regardless of age of mother) as the numerator and the female population (age 15-44 of each race/ethnicity) as the denominator. Population figures used to calculate rates are 1997-based preliminary estimates from the Demography Section, Colorado Division of Local Government. * indicates fewer than three events in the category.

Live birth order refers to the total number of children born live to mother. Percentages are calculated using the total births of each age or education group as the denominator, excluding cases with birth order unknown. Sums may not add to total due to cases with age or education of mother unknown. All categories of education are for mothers age 18+ only. * indicates fewer than three events in the category.

Age group and race/ethnicity of father are presented as reported on birth certificates, regardless of the parents' marital status. Percentages are calculated using the total births of each race/ethnicity category as the denominator, excluding cases with age group unknown. * indicates fewer than three events in the category.

Table B34. Live Births with Prenatal Blood Tests Performed: Colorado Residents, 1990-1997

YEAR	TOTAL BIRTHS	TEST PERFORMED					
		SYPHILIS		HIV		HEPATITIS	
		N	%	N	%	N	%
1990	53,491	50,531	94.5	5,454	10.2	16,924	31.6
1991	53,786	45,671	84.9	7,068	13.1	19,222	35.7
1992	54,525	48,787	89.5	5,850	10.7	18,099	33.2
1993	54,013	47,708	88.3	6,363	11.8	18,553	34.3
1994	54,050	48,725	90.1	14,971	27.7	41,406	76.6
1995	54,310	49,518	91.2	16,435	30.3	46,211	85.1
1996	55,779	54,041	96.9	24,250	43.5	51,900	93.1
1997	56,505	55,524	98.3	28,644	50.7	52,832	93.5

Data are presented as reported on birth certificates. Completeness of the reporting may vary by year. Data pertain only to blood tests performed, not results. Percentages are calculated using total births of each year as the denominator.

Rates are per 1,000 total live births of each age group and are calculated using five year averages including decimal places. Counts are presented as reported on birth certificates. Sums may not add to total due to cases with age group of mother unknown. * indicates fewer than three events in the category.

General fertility rates are live births per 1,000 women age 15-44 of each county or region. Sums may not add to total due to cases with county of residence unknown. Rates based on few actual cases must be viewed with caution. See inside back cover for descriptions of regions. * indicates fewer than three events in the category.

Rates are live births per 1,000 women in each age group. Table B43 provides counts and rates for teen age groups 10-14 and 15-19. Sums may not add to total due to cases with county of residence unknown. See inside back cover for descriptions of regions. * indicates fewer than three events in the category.

Percentages are calculated using the total births of each county/region as the denominator excluding cases with race/ethnicity unknown. See inside back cover for descriptions of regions. Sums may not add to total due to cases with county of residence unknown and/or race/ethnicity of mother not shown or unknown. * indicates fewer than three events in the category.

Low weight birth is less than 2,500 grams. Very low weight birth is less than 1,500 grams. See Technical Notes for conversion table of grams to pounds and ounces. Percentages are based on only those births with weight reported. See inside back cover for descriptions of region. Sums may not add to total due to cases with birth weight or county of residence unknown. * indicates fewer than three events in the category.

Percentages are calculated using the total births of each county/region as the denominator excluding cases with start of prenatal care unknown. See inside back cover for descriptions of regions. Sums may not add to total due to cases with county of residence unknown. * indicates fewer than three events in the category.

Birth counts by city include only those for which the birth certificate indicated mother's residence address within a city limit. Only those cities with 25 or more births are included in this table. Sums may not add to total due to cases with age of mother unknown. * indicates fewer than three events in the category.

Birth counts by city include only those for which the birth certificate indicated mother's residence address within a city limit. Only those cities with 25 or more births are included in this table. Sums may not add to the total due to cases with race/ethnicity of mother as unknown or not shown. * indicates fewer than three events in the category.
