Mineral County Births and Deaths 1999

Selected birth characteristics with 95% confidence limit: Mineral County residents, 1999	2
Selected birth characteristics by age group of mother: Mineral County residents, 1999	3
Selected birth characteristics by race/ethnicity of mother: Mineral County residents, 1999	4
Live births and fertility rates with 95% confidence limits by age of mother: Mineral County residents, 1999	5
Vital statistics summary: Mineral County residents, 1989, 1995-1999	6
Deaths from selected causes by race/ethnicity: Mineral County residents, 1999	7
Deaths and crude death rates with 95% confidence limits by age group: Mineral County residents, 1999	8
Deaths and crude death rates from selected causes by age group: Mineral County residents, 1999	9
Deaths, crude death rates and age-adjusted death rates with 95% confidence limits from selected causes: Mineral County residents, 1999	10
Appendix: Conversion Table of ICD-9 to ICD-10 Codes for Disease Mortality Used in Report	11

Selected birth characteristics with 95% confidence limit: Mineral County residents, 1999

*Fewer than three events in the category. Birth rates are per 1,000 total population. General fertility rates are births per 1,000 females aged 15-44. Fertility rates for mothers age 10-17 are births per 1,000 females of this age group. Infant and neonatal mortality rates are per 1,000 live births. Other death rates are per 100,000 population. Age-adjusted rates are adjusted to the 2000 U.S. population using the direct method applied to 10-year age groups. Prepared by Health Statistics Section, Colorado Department of Public Health and Environment.

*Fewer than three events in the category. Rates are deaths per 100,000 population. Crude death rates are calculated without age adjustment. Age-adjusted rates are adjusted to the 2000 U.S. standard population using the direct method applied to 10-year age groups. Age-adjusted rates provide a better basis for comparison among different geographical areas or time periods. Prepared by Health Statistics Section, Colorado Department of Public Health and Environment.

Appendix: Conversion Table of ICD-9 to ICD-10 Codes for Disease Mortality Used in Report

The *International Classification of Diseases (ICD)* is a classification system developed collaboratively between the World Health Organization (WHO) and 10 international centers so that the medical terms reported by physicians, medical examiners, and coroners on death certificates can be grouped together for statistical purposes. The purpose of the ICD and of WHO sponsorship is to promote international comparability in the collection, classification, processing, and presentation of mortality statistics. New revisions of the ICD are implemented periodically so that the classification reflects advances in medical science. Since 1900, the ICD has been modified about once every 10 years, except for the 20-year interval between the last two revisions, ICD-9 and ICD-10. Effective with deaths occurring in 1999, the United States began using the ICD-10, replacing ICD-9 used with 1979-98 data. Publications showing mortality data under ICD-10 will differ substantially from those under ICD-9 because of changes in coding rules, changes in category names and ICD numbers, and changes in the tabulation lists used to produce mortality data. The following table shows the ICD-9 and ICD-10 codes for diseases and injuries reported in this document. Data users should be mindful of the huge impact of the ICD-10 on mortality statistics and are encouraged to contact National Center for Health Statistics or the Health Statistics Section of the Colorado Department of Public Health and Environment (303-692-2160) for assistance in using the ICD-10 and data interpretation.

CAUSE	ICD-9	ICD-10
Cardiovascular Disease	390-434,436-448	I00-I78
